Re: DE 08-174 Conservation Services Group's
Certification Application for Class I Eligibility pursuant to RSA 362-F

Dear Ms. Stanton:

On December 30, 2008, Conservation Services Group submitted an application on behalf of Modern Innovative Energy, LLC requesting certification of the Modern landfill gas facility (Modern facility) as eligible to produce Class I renewable energy certificates (RECs) pursuant to RSA 362-F, New Hampshire's Electric Renewable Portfolio Standard law. Staff has reviewed the application and recommended approval noting that the Conservation Services Group application was complete on December 30, 2008.

Class I eligibility requires that a facility began operation after January 1, 2006 and that it produces electricity from certain renewable sources, one of which is methane gas. The application indicates that the Modern facility has a gross nameplate capacity of 6.4 megawatts, is fueled with methane gas and is located at 1455 Pletcher Road, Youngstown, New York. The facility began commercial operation in February 2006. The facility's NEPOOL generation information system facility code is IMP 32580.

The Commission has reviewed the Conservation Services Group application and determined that it has provided all the necessary information to demonstrate that the Modern facility is eligible for certification as a Class I facility. Therefore, the Commission hereby certifies that the Modern facility is a Class I renewable energy source effective December 30, 2008 and is eligible to be issued New Hampshire Class I renewable energy certificates. For the issuance of any renewable energy certificates, please be aware that since the facility is located in an adjacent control area, the applicant will need to provide to the Commission proof pursuant to Puc 2504.01 (a)(2) that the associated electricity produced by the facility was imported into the New England control area.
